Project Name	Househunt: Finding Your Perfect Rental Home
Marks	

Proposed Solution Template:

S.NO	Parameter	Description
1	Problem Statement (Problem to be solved)	Renters face difficulty finding verified rental homes, while property owners struggle to manage and promote their listings. The lack of a centralized, secure, and user-friendly platform leads to trust issues, poor communication, and inefficient rental processes.
2	Idea / Solution description	Create a secure, user-friendly platform where renters can book verified homes, owners can manage listings, and admins oversee activity to ensure a smooth rental experience.
3	Novelty / Uniqueness	House Hunt is unique for offering a role-based, all-in-one rental platform with verified listings, secure bookings, and admin oversight—making the rental process faster, safer, and more reliable than traditional methods.

4	Social Impact / Customer Satisfaction	House Hunt enhances trust in rentals by reducing scams, improving access to verified homes, and simplifying the rental process for both renters and owners—supporting safer and more efficient housing for all.
5	Business Model (Revenue Model)	House Hunt follows a freemium model with basic listings free and premium listings paid. Revenue comes from subscription plans for owners, booking service charges, ad placements, and partnerships with real estate and moving services.
6	Scalability of the Solution	House Hunt is built on a scalable MERN stack, allowing easy feature expansion and handling of increased users, data, and traffic as the platform grows.
